### Configuration Information - Factory Integrated Models

This section lists some of the steps required to configure a Factory Integrated Model. To ensure only valid configurations are ordered, Hewlett Packard Enterprise recommends the use of an HPE approved configurator. Contact your local sales representative for information on configurable product offerings and requirements.

1. Factory Integrated Models must start with a CTO Server.
2. FIO indicates that this option is only available as a factory installable option.
3. All Factory Integrated Models will be populated with sufficient hard drive blanks based on the number of initial hard drives ordered with the server.
4. Some options may not be integrated at the factory. Contact your local sales representative for additional information.

### Step 1: Base Configuration (choose one of the following configurable models)

[Chassis]	HP ProLiant DL120 Gen9 8SFF Configure-to-order Server	HP ProLiant DL120 Gen9 4LFF Configure-to-order Server	HP ProLiant DL120 Gen9 Non-hot Plug 4LFF Configure-to-order Server

<b>Management</b>	iLO Management (standard), Intelligent Provisioning (standard)		
<b>USB</b>	1 front, 1 internal, 2 rear		
<b>Ears</b>	HPE Thumbscrew Ears		

### Step 2: Choose Required Options (only one of the following from each list unless otherwise noted)

### Configuration Information - Factory Integrated Models

- HPE Processors** Select one processor from Core Options-Processor section below,
- Select one xxxxxx-L21
  - Only one processor supported.
  - DDR4 speed is the maximum memory speed of the processor. Actual memory speed may depend on the quantity and type of DIMMs installed.
- For the Intel® C600 Chipset E5-2600 Series, the letter preceding the model number indicates the Product Line (E3, E5, E7); 2600x v#, 2 = number of CPUs in a Node, 6 is socket/segment designation, 00 = Processor SKU, x = L for low power SKUs and v# (not yet designated) = version number.
- HPE Memory** Select one or more memory from Core Options-Memory section below,
- UDIMM, RDIMM, and LRDIMM are all distinct memory technologies and cannot be mixed within a server.
  - HPE memory options from previous generation servers are not qualified or warranted with Hewlett Packard Enterprise Gen9 systems. HPE SmartMemory is required to realize the memory performance improvements and enhanced functionality listed in this document for Gen9.
  - If only one processor is installed, only half of the total DIMM slots are available. When populating with two processors all DIMM slots are available.
  - Depending on the memory configuration and processor model, the memory speed may run at 2400MHz, 2133MHz, 1866MHz or 1600MHz. Please see Memory Population Table or the Online Memory Configuration Tool at: <http://www.hpe.com/go/ddr4config>.
- HPE Power Supplies** Select one or more power supplies from Core Options-Power Supplies section below:
- Prior to selecting a power supply option, it is highly recommended that you review your server configuration in the HPE Power Advisor tool to determine the right size power supply for your server configuration. The HPE Power Advisor is located at: <http://www.hpe.com/info/hppoweradvisor>.
  - By RPS Enablement Kit power options, mixing of power supplies in the same RPS enablement kit is not supported. All power supplies must be of the same input voltage, output rating, and efficiency rating. If non-matching power supplies are installed, you may receive an error message and/or experience operational issues with your server.

### Step 3: Choose Additional Factory Integratable Options

- HPE Unique Options** Select one or more Unique options from Core Options section below.
- This section may contain FIO options, please see the Unique options section below.
  - FIO indicates that this option is only available as a factory installable option.

- HPE Drives** Select one or more drives from Core Options-HPE Drives section below:
- The components of a storage subsystem (e.g. the drive, the HBA/controller, firmware, and the server backplane) should operate at the same data transfer rate or the system bandwidth will be negotiated down to an acceptable level for all components.
  - Hard drives have either a one year or three year warranty; refer to the specific hard drive QuickSpecs for details.
  - The HPE ProLiant Gen9 Smart Storage solutions are equipped with re-designed Small Form Factor (SFF 2.5 in) and Large Form Factor (LFF 3.5 in) hot plug carriers for HPE Qualified Hard Drives and Solid State Drives. These new carriers provide status and activity indicators as well as caution indicators for "Do Not Remove."

### Configuration Information - Factory Integrated Models

- HPE FlexibleLOM** Select a FlexibleLOM from Core Options-Networking section below,
- Only one FlexibleLOM can be added to the server. These options are upgradeable and can be changed from the original configuration after the server is shipped.
  - For 10Gb adapters, a minimum of two Gigabytes (2 GB) of server memory is required per each adapter.
  - Please see the QuickSpecs for Technical Specifications and additional information: <http://www.hpe.com/go/ProLiantNICs>.
- HPE Networking** Select a standup NIC adapter from Core Options-Networking section below,
- Please see the QuickSpecs for Technical Specifications and additional information: <http://www.hpe.com/go/ProLiantNICs>.
  - These options are upgradeable and can be changed from the original configuration after the server is shipped.
  - For 10Gb adapters, a minimum of two Gigabytes (2 GB) of server memory is required per each adapter.
- HPE Storage Controllers** Select one or more Storage options from Additional Options section below.
- The embedded B140i controller will operate in UEFI only mode. For legacy support an additional controller will be needed, and for CTO orders please also select the Legacy mode settings part, 758959-B22.
  - This section may contain FIO options, please see HPE Storage Controllers section below.
  - FIO indicates that this option is only available as a factory installable option.
- HPE I/O Expansion Options** Select one or more Riser Kit options from Core Options section below.
- This section may contain FIO options, please see HPE I/O Expansion Options section below.
  - FIO indicates that this option is only available as a factory installable option.
- HPE Cooling Options** Select one or more Fan Kits from Core Options section below.

### Memory

#### Memory Population guidelines

#### General Memory Population Rules and Guidelines:

- . Place the DIMMs with the highest number of ranks in the white slot when mixing DIMMs of different ranks on the same channel.
- . Do not mix RDIMMs or LRDIMMs.
- . Quad rank RDIMMs are not supported in HPE ProLiant DL120 Gen9 servers.
- . DIMMs of different speeds may be mixed in any order; the server will select a common optimal speed.
- . The maximum memory speed is a function of the memory type, memory configuration, and processor model.
- . The maximum memory capacity is a function of the memory type and number of installed processors.
- . To realize the performance memory capabilities listed in this document, HPE SmartMemory is required.
